The Welvent welded steel framed lateral is the answer for those requiring a concrete floor. The laterals are available 25mm deep to replace existing 25mm deep units which have bent.

The new heavy duty version is 43mm deep - with a 40mm welded steel ladder frame covered with an expanded metal sheet. We offer standard widths of 300mm and 350mm or wider if requested.

- Heavy duty
- Durable
- Proven
- High proportion of free area

We are able to make special low number runs if you have some strange laterals to replace.
