Welvent don't just offer a fan – they will also provide all the starter gear and a range of controls. All the electric consoles are built-in house, and include the option of inverters for speed control.

The inverter option provides many extra potential advantages, reduced running costs, reduced start load, and increased flexibility.

The consoles are made up from quality Group Schneider components – Telemecanique – etc. Each panel is complete with all the contactors, overloads, MCB protection, manual/off/auto switching, indicator lights, 24volt control circuit, transformer, isolator, ventilation fan, and a terminal strip for easy connections, all of this is contained in a quality housing.

A wiring diagram is provided with each panel as well as a strip terminal diagram.

## Panel building service

Welvent also offer a sub contract panel building service – you supply the wiring diagram and we will do the rest, or if you don't have a wiring diagram we can design the panel to suit your exact requirements.
